Major Software Releases

- ◇ **DataSpread**: A Spreadsheet-Database Hybrid. DataSpread has a spreadsheet frontend, and a database backend. DataSpread inherits the flexibility and ease-of-use of spreadsheets, as well as the scalability and power of databases, and scales to billions of cells seamlessly. 2016. URL: <http://dataspread.github.io>
- ◇ **OrpheusDB**: A relational dataset versioning system. OrpheusDB is built on top of standard relational databases, thus it inherits much of the same benefits of relational databases, while also compactly storing, tracking, and recreating versions on demand, all very efficiently. 2016. URL: <http://orpheus-db.github.io>
- ◇ **Zenvisage**: An ‘effortless’ data visualization tool. Zenvisage can automatically identify and recommend visualizations that match desired user patterns. The user can specify at a high level what they are looking for either via interactions or via a query language (ZQL), and the system will perform the necessary computation to identify these visualizations. 2016. URL: <http://zenvisage.github.io>
- ◇ **Squish**: A near-optimal structured data compression system. Squish identifies correlations between attributes to compress relational datasets both vertically as well as horizontally. 2016. URL: https://github.com/Preparation-Publication-BD2K/db_compress
- ◇ **Populace**: Software releases of optimized implementations of various crowdsourced data processing algorithms and systems. 2015. URL: <http://populace-org.github.io>
